Draft the private-package auth decision brief for Robert

BLI-2147 is the one thing truly stuck: Dependabot CI fails on an empty DESIGN_SYSTEM_PAT and your own local installs now return HTTP 401 on the @blinqx-shared packages, blocking merges across Basenet. You handed the admin piece to Robert; the thread is sprawled across five issues. Dia can synthesize it into one page: root cause, the two fix paths (cross-org GITHUB_TOKEN packages:read grant vs. a repository-restricted DESIGN_SYSTEM_PAT Dependabot secret), and exactly what the package/org admin must verify.

Top to-dos

**Confirm Basenet main is green after the source-map-js fix**

BLI-2173's advisory patch merged late yesterday, but the merge-SHA CI run and stackit-test staging acceptance were still settling. Main CI gates everything else, so worth a quick confirm it fully cleared.

New updates

01

Your Linear automation keeps closing issues too early *Dev Workflow*

The GitHub-Done automation marked BLI-2166, 2170, 2173 and 2101 as Done at merge, before staging acceptance, and you reopened each one by hand.

Tightening that rule would stop the churn. 

Your day

All

Hoofddorp — AetherLink Wave 2 coaching (Connect Checkout · OFS-

day

2 · Aurora)**Hoofddorp — AetherLink Wave 2 coaching (Connect Checkout · Aurora) — All day**

On-site squad coaching through the AI-native SDLC playbook. Continues tomorrow with the Provisioning squad.
