Peaches on a Plate, Auguste Renoir, 1902/1905. oil on canvas

Wednesday, and it's just you and a wide-open morning until one call rolls in this afternoon. The good kind of quiet.

Push your work forward

*Let's
do it →*

Close out the admin-image CI fix with Robert

Robert did steps 1 and 2 (the GHCR package access) and asked how to verify it works. I can draft the exact verification steps and a reply back to him so this High-priority blocker stops failing every publish run.

Top to-dos

Sandbox-verify the Mollie payment adapter

Marked Urgent and labeled blocked, but the ticket itself says the test keys are free and instant. It's the fastest path to your first verified vendor adapter, and it covers the money path.

**Keep the unified capability registry moving**

In Progress and High. Four increments have already landed, including a CI gate that fails when a UI action has no agent path. It maps straight onto the MCP and A2A protocol research you were deep in yesterday.

**Make the docs-to-Cloud-Foundry canonical call**

This ticket exists to force one decision: which host is canonical once CF is production. The sitemap and deploy work downstream can't settle until you pick.

New updates

01

Migration-rollback CI breakage fixed for good *CI/CD*

Robert replaced the hardcoded 0042 list with a dynamic helper and verified it on main. The fixture desync that reopened on every new migration is gone. 

Your day

2:00p **Ryan / Robbie (Catapulze)**

Ryan / Robbie (Catapulze) — 2:00 PM – 3:00 PM

External call over Microsoft Teams with Robbie from Catapulze.

With love from
